

3300/16 XY/GAP Dual Vibration Monitor

Bently Nevada™ Asset Condition Monitoring

Description

The 3300/16 XY/Gap Dual Vibration Monitor continuously measures and monitors two independent channels of radial vibration, and average shaft position (gap), accepting inputs from two proximity probe/ Proximitor® systems. This monitor is designed to supersede the 3300/15 Dual Radial Vibration Monitor, which does not provide radial position gap alarms.

Specifications and Ordering Information
Part Number 141498-01
Rev. J(04/07)

Specifications

Signal Inputs

Accepts one or two proximity probe signals.

Input Impedance:

10 k Ω .

Sensitivity:

100 mV/mil (4 V/mm) or
200 mV/mil (8 V/mm) user-programmable.

Power Consumption

2 watts (nominal)

Signal Conditioning

Accuracy at +25° C (+77° F):

Within $\pm 0.33\%$ of full-scale typical,

- $\pm 1\%$ maximum.
- $\pm 2\%$ maximum with 2X Trip Multiply
- $\pm 3\%$ maximum with 3X Trip Multiply

Frequency Response:

User-programmable for 4 to 4,000 Hz
(240 to 240,000 cpm), or
1 to 600 Hz (60 to 36,000 cpm); -3dB nominal.

Note: The 1 to 600 Hz (60 to 36,000 cpm) option is not recommended for machine applications with rapid startup and coastdown rates where acceleration /deceleration exceeds 1000 rpm/s. Because of the extended low frequency range to 60 cpm, the monitor circuitry will retain vibration transients normally experienced during fast startups (such as with motor driven equipment). This can hold vibration levels above alarm setpoints beyond alarm time delays. This may result in Danger relay actuation after the internal time delay has lapsed, even if

actual vibration has decreased below the Danger alarm setpoint level. If the standard 4 Hz (240 cpm) low frequency limit is not satisfactory for your application, contact your sales professional. The 1 Hz (60 cpm) option is recommended for applications where shaft rotative speed is less than 1,000 rpm.

Recorder Outputs

User-programmable for +4 to +20 mA, 0 to -10 Vdc, or +1 to +5 Vdc. Voltage or current outputs are proportional to programmed monitor full-scale. Individual recorder outputs are provided for each channel. Monitor operation is unaffected by short circuits on recorder outputs.

Output Impedance (voltage outputs):

100 Ω . Minimum load resistance is 10 k Ω .

Voltage Compliance (current outputs):

0 to +12 Vdc range across load. Load resistance is 0 to 600 Ω when using +4 to +20 mA option.

Recorder Accuracy (in addition to signal conditioning accuracy) at +25°C (+77°F):

- +4 to +20 mA: $\pm 0.7\%$ of signal, ± 0.09 mA offset.
- +1 to +5 Vdc: $\pm 1.1\%$ of signal, ± 10 mV offset.
- 0 to -10 Vdc: $\pm 1.1\%$ of signal, ± 15 mV offset.

Buffered Transducer Outputs

There is one coaxial connector per channel on the front panel and one terminal connection per channel on the rear panel. All are short circuit protected.

Output Impedance:

100 Ω .

Transducer Supply Voltage

User-programmable in Power Supply for -24 Vdc, or -18 Vdc, current limited on individual monitor circuit board.

Note: Contact your sales professional if 3000 series transducers are to be used in the monitoring system which also uses 3300 and/or 7200 series transducers.

Alarm Setpoints

In addition to vibration Alert and Danger setpoints, gap Alert setpoints are available for both channels.

Resolution:

Alarms are digitally adjustable from 0 to 100% of full-scale and can be set within LCD resolution ($\pm 1.6\%$) to desired level.

Repeatability:

Once set, alarms are repeatable within $\pm 0.39\%$ of full-scale.

Gap Alarm Time

Delay:

6 seconds.

Relays

One alarm relay module can be installed behind each monitor. At least one relay module must be ordered with each 3300 System.

Displays

Non-multiplexing vertical bargraph type Liquid Crystal Display (LCD). Individual 63 segment LCD per channel. Probe Gap indicated on a third, center scale. LCD also displays error codes and monitor ADJUST mode.

Resolution:

Within $\pm 1.6\%$ of monitor full-scale.

Size:

83 mm (3.25 in), vertical dimension.

LED Indicators

OK:

One constant ON green LED per channel indicates OK condition of monitor, transducers, and field wiring. Constant OFF indicates NOT OK condition or Channel Bypassed (red Bypass LED will be ON). OK LED flashing at 1 Hz indicates channel has been NOT OK, but is now OK. OK LED flashing at 5 Hz indicates error code(s) stored in memory.

Alarm:

Two red LEDs per channel indicate alarm status (individually for Alert and Danger). Flashing alarm LED indicates First Out (independent for Alert and Danger).

Bypass:

Two red LEDs indicate the status of Danger Bypass and Rack/Channel Bypass functions (individually per channel). LEDs flash when monitor is in Trip Multiply mode.

Environmental Limits

Operating

Temperature:

0°C to +65°C (+32°F to +150°F).

Storage

Temperature:

-40°C to +85°C (-40°F to +185°F).

Relative

Humidity:

To 95%, non-condensing.
